

ALSTON®

CARE & MAINTENANCE

Alston is an easy-care material, treated with specialist finishes that repel both stains and water, resulting in a fabric that keeps its design intent, colour and technical appeal. To help preserve the aesthetic of the fabric, a suede brush can be used to clean surface contaminants and keep the handle pristine.

For Profile, in seating applications, regular vacuuming will remove any particles. For a deeper clean please use foam-type suede cleaner. Both Profile and Contour are also suitable for dry cleaning.

	PROFILE	CONTOUR	ULTRA
Composition	100% Polyester	100% Polyester	100% Polyester
Useable Width *	150cm	150cm	150cm
Martindale Wear Test	Min. 50,000 cycles	Min. 20,000	Min. 20,000
Wet & Dry Crocking	Min. GS 4	cycles Min. GS 4	cycles Min. GS 4
Colourfastness to Light	Min. 440kj	Min. 220kj	Min. 220kj
Soiling & Cleanability	Min. GS 4 FM-	Min. GS 4	Min. GS 4
Flammability (Laminate)	VSS302 max. 80mm/min.	FMVSS302 max. 80mm/min.	FMVSS302 max. 80mm/min.

**Certain colours are available at a width of 170cm. Please enquire for more information.*

All Alston Technosuede fabrics can be supplied laminated or unlaminated and can be technically tuned by our internal experts to any given requirement. The shades shown here represent those that are currently being manufactured. Bespoke colours can be developed very quickly, and with low minimum order quantities.

The Alston range is available on request as 100% recycled - GRS certified (Global Recycled Standard). As part of our sustainability mission, we have invested in technology to reduce water consumption by 70% and a switch to natural gas - reducing air pollution by 96%. The use of a heat energy and reduce CO recycling system has allowed the factory to reuse 20% of heat 2 emissions by 40%. Alston is also OEKO-TEX Standard approved.

A truly modern creation, **ALSTON TECHNOSUEDE** offers designers endless possibilities. The high-performance, suede-effect fabric was developed by Transcal over a 5-year period, ensuring it was ready to meet the demands of daily use across various transport sectors - offering the highest levels of performance and aesthetic value, whilst being luxurious to the touch.

Transcal developed further versions that were carefully created to offer customers flexibility and choice. The extensive Alston range has been matched to Transcal's prestige leather and vinyl range, creating vast opportunities for seamless combinations - with bespoke colour development available.

ALSTON CONTOUR was developed with special stretch characteristics to help trim deep draw areas, ideal when moulding or trimming concave and convex areas such as headliners, dashboard areas, post pillars and sun visors.

CONTOUR

PROFILE

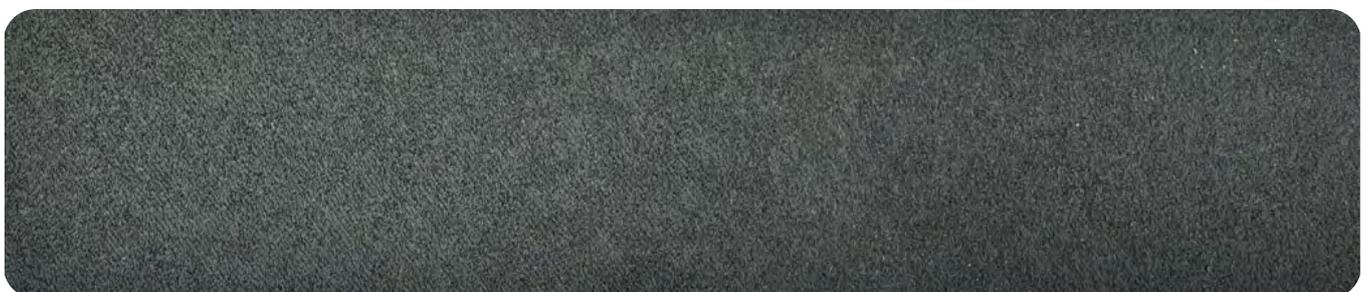

ALSTON PROFILE is heavier in weight and was rigorously developed to offer customers increased abrasion resistance for use on hard-wearing applications - such as seating - the material has a short microfibre pile that is soft yet durable.

ALSTON ULTRA is Transcal's most advanced material. Incorporating the stretch and technical qualities of Contour with a reduction in suede pile height - it is the perfect choice for upper environment applications such as headliners, pillars and sun visors.
